

Google Cloud SQL Cost Estimation (India & UK)

Requirements:

- Upto 500 users with MySQL database
- 2GB RAM, 1 vCPU
- Emails and Data Storage
- Regions: India (Mumbai) and UK

Estimated Monthly Cost Breakdown:

vCPU (1 core): $\$0.054/\text{hour} \times 730 \text{ hours} \approx \$39.42/\text{month}$

Memory (2GB): $\$0.0075/\text{hour} \times 730 \text{ hours} \approx \$5.48/\text{month}$

SSD Storage (50GB): $50\text{GB} \times \$0.17/\text{GB} \approx \$8.50/\text{month}$

Total Estimated Cost: $\$39.42 + \$5.48 + \$8.50 = \$53.40/\text{month}$

Additional Notes:

- High Availability (HA) will increase costs.
- 1-Year commitment saves ~25%, 3-Year commitment saves ~43%.
- Egress traffic (outgoing data) costs \$0.12 - \$0.19 per GB.
- Use Google Cloud Pricing Calculator for exact estimates.
